

ABSTRACT

The invention provides a method and system for obtaining updated information using a portable disk-based information device. The disk-based information device may be included within or attached to a portable networking device such as a personal data  
5 assistant (PDA) or a cellular telephone. Update information may be received from a data provider through, for example, a mobile telephone network. The update information may be compared with information provided on the disk. Updated information may then be delivered to a user in response to a user request, reporting new information and replacing  
10 outdated information provided on the disk with information received from the data provider.
